

Contents

1. Introduction	1
2. Definitions	5
3. General principles of species-rich grasslands restoration	7
4. Selection of donor sites	8
4.1 Arrhenatherion	8
4.2 Trisetion	9
4.3 Mesobromion/Xerobromion	9
4.4 Molinion	10
4.5 Cnidion	11
4.6 Nardion	12
5. Donor site databases and information systems of nature-oriented greening measures	13
5.1 Donor site database	13
5.2 Information systems of nature-oriented greening measures	16
6. Seed production in semi-natural grasslands	17
7. Techniques for harvesting seeds and plant material in species-rich grasslands	21
7.1 Generalities	21
7.2 Description of the techniques	23
7.2.1 Green hay harvesting	23
7.2.2 Dry hay harvesting (haymaking)	24
7.2.3 On-site threshing	25
7.2.4 Dry hay threshing	26
7.2.5 Seed stripping	27
7.2.6 Vacuum harvesting	29
7.2.7 Hay flower (seed-rich chaff)	30
7.2.8 Raking	30
7.2.9 Topsoil stripping	31
7.2.10 Turfing	32
8. Agricultural production of seeds from regional provenance	33
8.1 From the natural location to the field	33
8.2 Collecting in provenance regions and propagating in production areas	34
8.3 Methods of harvesting in native seed propagation	35
8.4 Seeds directly from donor sites or out of agricultural propagation?	36
8.5 Important points for the use of seed-mixtures from indigenous species out of agricultural propagation	38
9. Site assessment and preparation on receptor sites	39
9.1 General assessment criteria	39
9.2 Site preparation in terms of regenerative measures	40
9.3 Site preparation of arable land or ploughed grassland	40
9.4 Site preparation on raw soils	41
10. Techniques for the establishment of species-rich grasslands	43
10.1 Time of realisation	43
10.2 Sowing seeds and seed mixtures	44

10.2.1	Manual sowing	45
10.2.2	Sowing by means of sowing and spreading devices	45
10.2.3	Over-sowing	46
10.2.4	Rotavator sowing	47
10.2.5	Wet sowing or hydro-sowing	47
10.3	Spreading seed-rich biomass	47
10.3.1	Green hay	48
10.3.2	Dry hay	49
10.3.3	Hay-flowers	50
10.3.4	Raked material	50
10.4	Special techniques for protection against erosion and drying out	50
10.4.1	Mulch sowing (cover sowing)	50
10.4.2	Mechanical mulch sowing	51
10.4.3	Cover-crop sowing, nursery sowing	51
10.4.4	Mulch sowing with the use of organic biodegradable geotextiles	52
10.4.5	Winter sowing	53
10.5	Restoration with site-specific plant materials	53
10.5.1	Planting of individual species	53
10.5.2	Grass sods/turfs	54
10.5.3	Sod rolls	55
10.5.4	Spreading of seed-rich topsoil	56
10.6	Combined restoration techniques	56
10.6.1	Seed-sod combination method	57
10.7	Natural succession	57
11.	Management options and monitoring of restoration success	59
11.1	Management after restoration	59
11.1.1	Raw soil sites	59
11.1.2	Seed- and nutrient-rich sites (arable land, fallows)	60
11.1.3	Restoration in species-poor grasslands	61
11.1.4	Important information for practical implementation	61
11.2	Transition to normal management	61
11.3	Monitoring of restoration success	62
12.	Quality standards for seeds and seed mixtures from a specific area and region ...	65
12.1	Quality standards for green hay, dry hay, material from seed stripping and on-site threshing	65
12.2	Harvesting methods, harvesting time and seed content	65
12.3	Taking samples	66
12.4	Purity and thousand seed weight (TSW) of seed mixtures harvested on donor sites	66
12.5	Transfer rate	67
12.6	Germinating capacity of seed mixtures harvested on donor areas	67
12.7	Germinating capacity of single species	69
13.	Quality standards for native seeds regarding nature conservation	70
13.1	Need for European standards	70
13.2	Status quo in different countries	70

13.3	Structure of production and trade	71
13.4	Legal framework - existing European directives	71
13.5	Preconditions for European standards	71
13.5.1	Regions of provenance/seed zones	71
13.5.2	Transnational seed zones	73
13.6	Recommendations for European standards (native plant certificate)	73
13.6.1	Compliance with nature conservation	73
13.6.2	Spatial relation	74
13.6.3	Avoidance of genetic loss	74
13.6.4	Verifiable declaration	75
13.6.5	Implementation of European standards	75
14.	Practical implementation of grassland restoration	76
14.1	Lessons learned (how to avoid failures)	76
14.1.1	Failures due to incorrect application of the available techniques	76
14.1.2	Failures due to insufficient or incorrect application of botanical and ecological knowledge	78
14.2	Decision charts	79
14.2.1	Decision chart for seed supplying strategies	80
14.2.2	Recommendations for the establishment of species-rich grasslands	81
15.	Examples from the SALVERE project	84
15.1	Methods for soil analysis	84
15.2	Parameters for restoration success	86
Example 1	- Target vegetation type: Bromion, Italy	87
Example 2	- Target vegetation type: Bromion, Germany	88
Example 3	- Target vegetation type: Bromion, Slovakia	89
Example 4	- Target vegetation type: Festuco-Agrostion, Italy	90
Example 5	- Target vegetation type: Arrhenatherion, Italy	91
Example 6	- Target vegetation type: Arrhenatherion, Austria	92
Example 7	- Target vegetation type: Arrhenatherion, Czech Republic	93
Example 8	- Target vegetation type: Arrhenatherion, Germany	94
Example 9	- Target vegetation type: Arrhenatherion, Slovakia	95
Example 10	- Target vegetation type: Arrhenatherion, Poland	96
Example 11	- Target vegetation type: Arrhenatherion, Poland	97
Example 12	- Target vegetation type: Molinion, Poland	98
Example 13	- Target vegetation type: Molinion, Austria	99
Example 14	- Target vegetation type: Molinion, Austria	100
Example 15	- Target vegetation type: Molinion, Austria	101
Example 16	- Target vegetation type: Deschampsion, Germany	102
